U.S. Patent Application No. 10/643,622 Anomey Docket No. 351913-992800 (2102397)

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

 (Currently Amended) A memory device for Interfacing with an integrated circuit communicating via a communication bus, said device comprising:

a decoding circuit for receiving communication signals received via the communication bus, for decoding the communication signals and for generating a plurality of protocol signals in response thereto;

a protocol select circuit for receiving said plurality of protocol signals; an array of memory cells;

a controller circuit for controlling the operation of said array of memory cells; <u>and</u> said protocol select circuit for configuring the controller circuit in response to the plurality of protocol signals.

- 2. (Original) The device of claim 1 wherein said memory cells are non-volatile memory cells.
- (Original) The device of claim 2 wherein said protocol select circuit is a volatile storage element.
- (Original) The device of claim 3 wherein said volatile storage element is a register.
- 5. (Original) The device of claim 3 wherein said volatile storage element is a flip-flop.
- 6. (Original) The device of claim 3 wherein said volatile storage element is an SRAM.
- (Currently Amended) A memory device for interfacing with an integrated circuit

U.S. Patent Application No. 10/643,622 Attorney Docket No. 351913-992800 (2102397)

communicating via an LPC bus, said circuit generating a start field, said device comprising:

- a decoding circuit for receiving the start field and for generating a plurality of protocol signals;
- a protocol select circuit for receiving said plurality of protocol signals; an array of non-volatile memory cells;
- a controller circuit for controlling the operation of said array of non-volatile memory cells; <u>and</u>

said protocol select circuit for configuring the controller circuit in response to the plurality of protocol signals.

- 8. (Original) The device of claim 7 wherein said protocol select circuit is a flip-flop.
- 9. (Original) The device of claim 7 wherein said plurality of protocol signals represent protocol for LPC communication and for FWH communication
